Introduction

POPnotary allows you to perform notarizations during video calls. After your user account is given notary permissions, you get access to several notary-specific features. These features allow you to perform the notarizations, and also maintain all of the documentation and certification that you are required to have. You get access to the following features:

- Notary one-off WorkFlow tasks that lead you and the consumer through the process of a notarization.
- Notary template WorkFlows if your organization set them up.
- A personal notary profile where you upload all the documents required to be a notary. The system helps you maintain these documents; if a certification will soon expire, the system sends you a warning notification.
- A personal notary journal. Almost every state requires notaries to keep a journal to document every notarization that they've performed. The system maintains a journal for you. It automatically saves all information related to notaries that you performed. Only you can download the contents of the journal or transfer ownership to another notary.

This document leads you through the processes for setting up your profile, performing notarizations, and accessing your journal.

Note:

States expect notaries to do their own research and education to comply with local laws and standards. *POPnotary* is a tool that enables and supports notaries in performing notarizations. Eltropy does not provide training on how to be a notary. POPi/o does, however, obtain certification from states to offer *POPnotary*, and enforces each states' requirements on notary certification. For self-education, the [National Notary Association](#) provides training material.

Notary Certification Requirements

To perform notarizations, you must be commissioned and certified by your state government. Eltropy does not provide certification; therefore you must obtain all necessary certificates. To be certified, you must acquire the following items:

- State notary commission certificate
- Notary bond
- Notary insurance
- Notary eSeal
- Digital signing certificate through IdenTrust™ (minimum of a basic assurance certificate)

Remember that each state has its own requirements for the certifications or documents. Ensure that you understand your state's requirements before fulfilling these requirements.

Set Up Your Notary Profile

Before performing notarizations, you must upload all your certification to your Support Center profile. You may need to work with your organization to acquire the necessary certificates. Reference the section above along with your state government's information to ensure that you meet all requirements.

The following sections lead you through the process of setting up your notary profile.

Obtain Digital Signing Certificate

To perform notarizations through video calls, you must have a digital signing certificate through IdenTrust™. The following are generic steps. For more detailed information, visit the [IdenTrust™ support center](#).

1. Navigate to the IdenTrust™ website: <https://www.identrust.com/>.
2. Select the eNotary certificate option in the menu.
3. Click **Buy Now**.
4. In the list of eNotary programs, select **POPi/o** (if you do not see POPi/o, you can select **Other Notary Program Not Listed**).
5. Select **IGC Notaries Basic Assurance**. If you want, you can select the medium assurance option; POPi/o only requires the basic assurance.
6. Continue through the process and follow the prompts. You will enter your personal information, payment information, and upload required forms.
7. Set a password for the signing certificate.
8. Download the signing certificate. This is a PFX file.

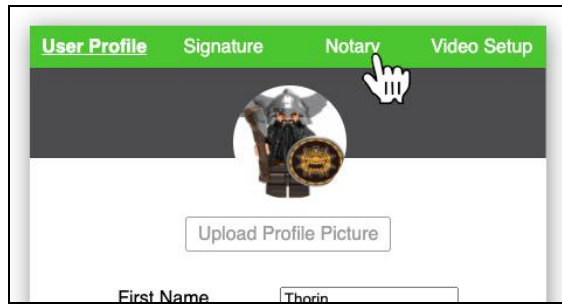

After completing the process, IdenTrust™ provides you with a digital signing certificate as a PFX file. To upload the file to your POPi/o profile, you must include the password that you set for this file. Do not forget or lose the password.

Upload Documents to Your Profile

Before completing this section, you must have already obtained all required documents and certifications listed above.

1. In the Support Center, click your profile image in the top-right corner.
2. Click the **Notary** tab of your profile.

3. When the browser prompts you for your location, click **Allow**.
4. Upload the PFX digital signing certificate to [Notary E-Certification](#). When prompted, enter the password that you set for the PFX file when obtaining the certification.
5. Complete the **Notary Commission Information** section:
 - a. Enter the [Commission Number](#), [Effective](#) and [Expiration Date](#), and [State](#) from your commission certificate that your state issued you.
 - b. Upload the state commission certificate for [Notary Commission Certificate](#). This must be a PDF file.
 - c. Upload the [Notary Seal](#) that was issued to you. This must be a PNG file.
6. Complete the **Verified Bond** section by uploading a PDF of the bond issued your bond provider and entering the [Effective](#) and [Expiration](#) dates.
7. Complete the **Verified Insurance** section by uploading a PDF of the insurance policy that you purchased and entering the [Effective](#) and [Expiration](#) dates.
8. Click **Save**.

Perform Notarizations

You must already have your notary profile set up and added to a notary team.

You have two options for performing notarizations during video calls: 1) using a notary template, or 2) using a one-off WorkFlow. An administrator must set up notary templates, so this option may not be available to you. Also, templates can only be used for specific documents, like mortgage loans. You can, however, use one-off WorkFlows for every notarization.

If an administrator set up notary templates, you perform the notarization just like a normal WorkFlow. The templates allow you to skip the steps of mapping signatures as part of a one-off flow.

Use a One-off WorkFlow

The following instructions assume that you are already in a call.

1. Ensure that video and audio are both enabled for you and the consumer. Audio and video of the notarization must be recorded by the system.
2. Select the one-off WorkFlow tab in the collaboration toolbar (bottom-right corner of the Support Center).

Signature Request

Additional Info: ☐

Notarize: ☒

Public Document: ☐ State:

Type: Amount: \$

Notarial Certificate Page: No file chosen

3. Enable [Notarize](#).
4. If the consumer is notarizing a document that your organization supplied, select [Public Document](#). If the consumer is notarizing a private document, leave this field disabled.
5. Select the [State](#) for which you are performing the notarization. If you are only commissioned by one state, you will only have one option.

6. Select the **Type** of notarization that you are performing.
7. If you are charging a fee, enter the **Amount**. This number is informational only and will be included in your Notary Journal.
8. If the document does not have the Notarial Certificate text, you can add this text by uploading it as a PDF for **Notarial Certificate Page**. The system will combine your uploaded PDF with the to-be-notarized document.

Tip:

The Notarial Certificate is a paragraph of text that states the facts of the notary. For example, the text may say: *"On <this date>, before me <your name> a notary of the public, appeared <consumer name>, proved on the basis of satisfactory evidence to be the person(s) whose name(s) is/are subscribed to this instrument, and acknowledged they executed the same."*

9. Click **Next**.
10. If you are notarizing a public document, browse for and upload the document. The document appears in your WorkFlow collaboration space.

If you are notarizing a private document, the consumer must send their document to you. After receiving the document, you must browse for and upload the document. After uploading the document, it appears in your WorkFlow collaboration space.

11. Map the to-be-notarized document:
 - a. Click **Action Menu**, hover over **Signature**, and select **Add Consumer Signature**.
 - b. Position the consumer signature in the appropriate position.
 - c. Click the settings cog () of the consumer signature and click **Add Date**.
 - d. Position the date near the consumer signature.
 - e. Click **Action Menu**, hover over **Signature**, and select **Add Employee Signature**.
 - f. Position the employee signature in the appropriate position.
 - g. Click the settings cog () of the employee signature and click **Add Date**.
 - h. Position the date near the employee signature.
 - i. Click **Action Menu**, hover over **Notary**, and select **Notary Seal**.
 - j. Position your notary seal in the appropriate position.
12. Ensure that the document contains a notarial certificate.

13. Click **Start**.

Public Key Date of Birth In the year 2033 Signature Request Menu

14. Perform the steps to apply and accept the document with the consumer.

15. The consumer completes an identity verification:

- They must upload or take photos of the front and back of their driver's license.
- They must complete knowledge-based questions that prove they know the information that only they would know - such as what street they grew up on.

16. After they complete the verification, you must approve their identification and knowledge-based answers.

Note:

If the consumer's ID scan fails, the WorkFlow cannot continue and will be abandoned.

14. Complete the notarization. The WorkFlow will prompt you and the consumer to sign and accept signatures, to apply your notary seal, and so forth.

15. Email the notarized document to the consumer.

16. Instruct the consumer on how to retrieve their document:

At the completion of the WorkFlow, a window displays to the consumer with an **Access PIN**. The consumer must save this PIN number. The email you sent in the previous step contains an **Access Key** and a download link. The consumer must click the link and enter both the key and PIN to download their document. If the consumer loses their PIN, they can contact you for a new one.

17. Complete the video call.

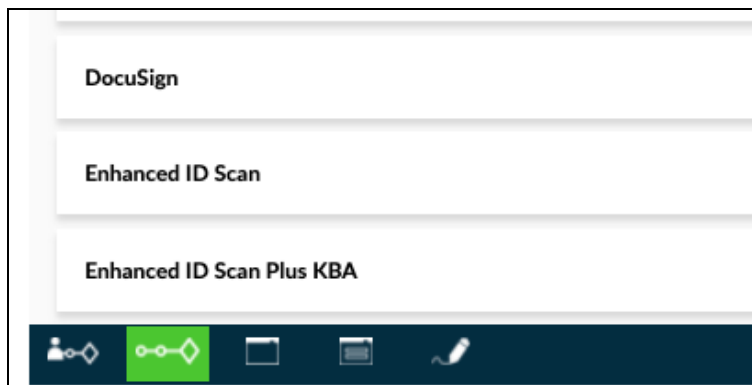

Reset Access PIN

Consumers must enter both their access PIN and key to download their notarized document. Eltropy saves every notarized document for 10 years. If the consumer needs to download the document anytime within this 10 years, they can do so with the same PIN and key that you originally provided during the notarization. If they do not have their PIN, you can reset it. You can only reset PIN numbers for notarizations that you performed; you cannot reset a PIN for another notary's notarization.

To reset a consumer's access PIN:

1. The consumer must start a video call with you.
2. Perform an identity verification Workflow:
 - a. Click the WorkFlows tab in the Collaboration toolbar (bottom-right of the Support Center).
 - b. Select **Enhanced ID Scan Plus KBA**.

- c. Click Start and follow the prompts of the Workflow.
 - d. The consumer will upload photos of the front and back of their ID and answer knowledge-based questions. The flow will prompt you to approve the consumer's submissions. Be sure to analyze the ID to verify that the consumer certainly is who they claim to be.
3. If you approve the ID verification, click the notary icon in the Share toolbar (top-right of the Support Center).

4. Search for the consumer's name.
5. Click **Reset PIN**.
6. Instruct the consumer to save the PIN along with their access key. These two must both be entered to download their notarized document. POPi/o saves notarized documents for 10 years, therefore the consumer should keep these items in their private records.

Access Your Notary Journal

The Support Center maintains a notary journal for you. After completing a notarization, all details of the WorkFlow are uploaded to your journal. The journal contains all required information or elements required by your state. Only you have access to this journal. You can allow your journal to be transferred to another notary or the system administrator if necessary. You can also download the contents of the journal - contact your administrator for more details.

1. In your Support Center, navigate to Reporting (menu > **Reporting**).
2. Click **Notary Journal** in the list of reports.
3. If you want to target a specific date range, select your desired range in the [Time Period](#) dropdown.
4. Click **Run Report**.
5. Find your desired journal entry and click to expand the details.
