Relevant Experience

NICE CXone - Senior Technical Writer

May '18 - Jan '26

- Created and maintained user focused REST API & product documentation, integration guides, and release notes. Delivered primarily HTML5 outputs of online help and developer documentation.
- Served as dev doc lead on the documentation team – oversaw API release notes, gave API trainings to writers, reviewed and consulted on API specifications with dev teams, and cultivated the API development processes.
- Authored partner integration content with lead engineers, like getting started guides and newsletters.
- Built an internal developer portal with MadCap Flare. This required an overhaul of all existing developer docs with lead engineers and Expert Services. Used HTML forms to streamline processes like registering integrator's apps.
- Developed an internal API lifecycle process with R&D and Product leadership. I created a communication strategy and public deprecation tracker for the API deprecation process.
- Implemented documentation processes into R&D and Product flows. This included creation of Swagger templates for development teams, review requirements in the release process, and set a new precedent and standard for API documentation.
- As context-sensitive help (CSH) project lead, collaborated with product managers and engineers to implement CSH across the product suite using MadCap Flare. Actively maintained CSH with Product.
- Managed source control and deployment of online help and internal developer portal with git.
- Managed internally and externally sourced documentation requests through JIRA. This requires strong rapport-building skills and cultivation of cross-departmental relationships.
- Performed usability testing of the online help. Compiled data from user research and Google Analytics to drive content and site enhancements, such as search accuracy.

POPi/o - Documentation Architect (Contractor)

Aug '21 - July '24

- Built comprehensive product documentation from the ground up for this fintech startup.
- Created new and overhauled existing implementation guides for API integrations, for both Support and customers.
- Created and maintained customer-facing product documentation, release notes, and feature introduction videos. Also created general materials for internal groups like Onboarding and Implementation.
- Handled customer communications for monthly releases, including maintenance and hotfix notifications. Planned communication strategy, drafted and sent notifications, and managed customer responses in HubSpot.
- Developed processes for internal/external technical communications, like release and maintenance notifications. This improved internal efficiency and empowered groups like Sales and Support to stay updated and reduce escalations.
- Consulted R&D as a UI/UX writer. Drafted UI text, implemented a UI text style guide, and reviewed UX flows.
- Trained internal personnel, like Support and CSMs, to create technical documentation. This increased support efficacy and established a crowd-sourced knowledge model.

Medicus Wealth Planning / Acute Engineering - Technical Writer Internships

2017

- Completed two internships while finishing university degree – one as a team lead to overhaul the new hire handbook for Acute Engineering, the other as a content revision consultant for Medicus Wealth Planning.
- Conducted highly technical interviews with senior structural engineers and financial consultants.

Skills

MadCap Flare & Capture	Adobe InDesign and Photoshop	Confluence & JIRA
HTML, CSS, JS, MD, XML, YAML	Google Analytics	Various AI Tools
