Professional Summary

Technical writer with 8~ years of experience documenting enterprise software in the CCaaS and fintech spaces. I've owned end-user product documentation, developer documentation, and UI/UX copy. Throughout my career I've gravitated to more technical content, like API & SDK docs or integration guides. I'm an exceedingly curious person and I learn very quickly. Personally, I enjoy the variety of skills I employ as a writer, from educating to video creation to new technologies like AI.

Relevant Experience

NiCE CXone – Senior Technical Writer – May '18 - Jan '26

- Created and maintained user focused API & product documentation, integration guides, and release notes. Delivered primarily HTML outputs of online help and developer documentation with a docs-as-code approach.
- Served as dev doc lead on the documentation team – oversaw API release notes, held API trainings for writers, reviewed and consulted on API specifications with dev teams, and cultivated the API development processes.
- Authored partner integration content with lead engineers, like getting started guides and newsletters.
- Authored partner integration content with lead engineers, like getting started guides and newsletters. Content requests were driven by Support tickets and internal requests. For example, an API authentication guide reduced integrator's onboarding tickets by 90%.
- Built an internal developer portal with MadCap Flare. Overhauled all existing developer docs with lead engineers and Expert Services. Used HTML forms to streamline processes like registering integrator's apps.
- Developed an internal API lifecycle process with R&D and Product leadership. Created a communication strategy and public deprecation tracker for the API deprecation process.
- Implemented documentation processes into R&D and Product flows. This included creation of Swagger templates for development teams, review requirements in the release process, and set a new precedent and standard for API documentation.
- As context-sensitive help (CSH) project lead, collaborated with product managers and engineers to implement CSH across the product suite using MadCap Flare. Actively maintained CSH with Product.
- Managed source control and deployment of online help and internal developer portal with Git.
- Managed internally and externally sourced documentation requests through JIRA. Demonstrated strong rapport building skills and cultivation of cross-departmental relationships.
- Worked with Support to handle tickets with a documentation impact. Established communication channels and processes, tracked work in Jira, and updated online help or internal KB articles as necessary.
- Performed usability testing of the online help. Compiled data from user research and Google Analytics to drive content and site enhancements, such as search accuracy.
- Built a repository of template AI prompts for tasks like reviewing or drafting content, or building Jira filters.

POPi/o – Documentation Architect (Contractor) – Aug '21 - July '25

- Built comprehensive product documentation from scratch, along with supporting processes and standards.
- Created internal and external implementation guides for API integrations, for both Support and customers.
- Created and maintained customer-facing product documentation, release notes, and feature introduction videos. Also created general materials for internal groups like Onboarding and Implementation.
- Handled customer communications for monthly releases, including maintenance and hotfix notifications. Planned communication strategy, drafted and sent notifications, and managed customer responses in HubSpot.

- Developed processes for internal and external technical communications, like release and maintenance notifications. This improved internal efficiency and empowered groups like Sales and Support to stay updated and reduce escalations.
- Consulted R&D as a UI/UX writer. Drafted UI text, implemented a UI text style guide, and reviewed UX flows.
- Trained internal personnel, like Support and CSMs, to create technical documentation. This increased support efficacy and established a crowd-sourced knowledge model.

Medicus Wealth Planning / Acute Engineering – Technical Writer Internships ‘17

- Completed two internships while finishing university degree – one as a team lead to overhaul the new hire handbook for Acute Engineering, the other as a content revision consultant for Medicus Wealth Planning.
- Conducted highly technical interviews with senior structural engineers and financial consultants.

Skills

MadCap Flare & Capture	Video Editing Tools	Confluence & JIRA
Zendesk	Various AI Tools	Microsoft Office
Postman, OpenAPI, StopLight	Adobe InDesign and Photoshop	Google Workspace
Docusaurus, GitBooks	HubSpot	Google Analytics
HTML, CSS, JavaScript	Markdown, YAML, XML	Git/GitHub (Source Control)

Education

Utah Valley University – Graduated: Dec ‘17

- Bachelor of Arts in English, Writing Studies
- Minor in Technical Communication

Languages

English: Native

German: A2-B1

Greek: A1-A2
